

Kyocera Document Solutions Co., Ltd.
Disclosure of the conflict minerals due diligence process
[3TG and Cobalt in Products]

This Minerals Report by Kyocera Document Solutions Ltd. (hereinafter Kyocera Document Solutions) covers the reporting year January 1, 2025 through December 31, 2025 and covers the disclosure of the due diligence process for conflict minerals (3TG: Tin, Tantalum, Tungsten, Gold) in products in accordance with EPEAT Standard 7.3.1, the disclosure of the due diligence process for cobalt in products required since 7.3.2 (7.3.2), procurement of 3TG and cobalt from responsible smelters/refineries verified under an accredited program (7.3.3), and (7.3.4).

Introduction

Centering on the document solutions business, Kyocera Document Solutions (and its subsidiaries) provides imaging devices such as multifunction devices and printers, software solutions, peripheral devices, and related services around the world. Kyocera Document Solutions has conducted a Rational Country of Origin Survey (RCOI) as shown below to assess the status of conflict minerals from the Democratic Republic of our company and adjacent countries (The following are countries covered:) that are used in imaging equipment products manufactured and sold by the company.

Reasonable Country of Origin Investigation (RCOI)

Kyocera Document Solutions conducts CMRT- and EMRT-based investigations of relevant suppliers using industry-standard conflict minerals reporting templates provided by the Responsible Minerals Initiative (RMI).

Our company uses the survey results to verify information on smelters/refineries and conducts a Reasonable Country of Origin Survey (RCOI) by considering data provided by other third parties. Combined with the risk assessment and mitigation efforts described in this report, this RCOI demonstrates our company's commitment to identify the country of origin of 3TG and cobalt in its supply chain, as well as mines and points of origin where appropriate.

If, based on the RCOI results, it is determined that 3TG and cobalt in a product come from a smelter/refinery that may or may have been sourced from the Target Country, our company will perform additional due diligence. The results of the RCOI are presented in the Due Diligence Results section.

Design of due diligence measures

Kyocera Document Solutions conducts due diligence with the aim of mitigating the risk of funding armed groups in targeted countries through the supply chain. Our company conforms to the internationally recognized due diligence framework as set out in the "Due diligence guidance for responsible supply chains of minerals from conflict-affected and high-risk areas (Edition 3, 2016.)" and related supplementary documents published by the Organisation for Economic Co-operation and Development (Organization for Economic Co-operation and Development: OECD), and has established due diligence in accordance with the following five steps.

Step 1: Establishing a Solid Management System

Step 2: Identify and assess risks in the supply chain

Step 3: Develop and implement strategies to address identified risks

Step 4: Conduct independent third-party audits of due diligence at identified points in the supply chain

Step 5: Reporting on Supply Chain Due Diligence

Implementation of due diligence

Step 1: Establish a solid management system

(1)responsible procurement policy

The basic policy of Kyocera Document Solutions is to conduct fair and honest transactions based on the Kyocera Philosophy. As for specific procurement policies, we have formulated the "our company Document Solutions Supply Chain CSR Procurement Guidelines," which are provided and shared with our suppliers and are also posted on the Kyocera website.

Our company, in cooperation with suppliers, is working to reduce the use of conflict minerals and materials and products containing metals that may be a source of funds for armed groups engaged in human rights violations in the target countries.

* Guidelines posted at:

<https://www.kyoceradocumentsolutions.com/global/en/sustainability/society/partners.html>

(2)internal organization

Kyocera Document Solutions has established a Responsible Mineral Procurement Promotion Team with the primary objective of implementing the aforementioned policy on conflict minerals. The team operates under the supervision of the Head of Procurement.

The team works closely with internal compliance and supply chain organizations to gather information from suppliers and share it internally. When compliance issues are identified, we work with relevant internal organizations and suppliers to address corrective actions.

The results of these efforts are shared regularly with procurement stakeholders, including the head of the Procurement Division.

(3)Supply chain management and external collaboration

Kyocera Document Solutions conducts annual supply chain surveys using the CMRT and EMRT provided by the Responsible Minerals Initiative (RMI). These surveys have become the primary means of identifying smelters/refineries supplying 3TG or cobalt in our company supply chain and assessing the risk that they are sourced from target countries.

After collecting data on smelters/refineries from suppliers, we refer to RMI's Responsible Minerals Assurance Process (Responsible Minerals Assurance Process: RMAP) and, where applicable, to equivalent third-party audit schemes such as those provided by the London Precious Metals Market Association (LBMA) or the Responsible Jewellery Association (RJC) to confirm that each smelter/refinery identified through the CMRT and EMRT has participated in the third-party audit programme. Based on this information, we are working to identify the country of origin of 3TG and cobalt in the supply chain.

In addition, Kyocera Document Solutions promotes cooperation with industry organizations to ensure appropriate cooperation with external organizations related to conflict minerals. Specifically, our company's parent company, Kyocera Corporation ("Kyocera") has been a key member of the Responsible Mineral Trade Working Group, established within the Japan Electronics and Information Technology Industries Association (JEITA) since its inception, and is

working to realize responsible mineral procurement. These Kyocera initiatives are shared by Kyocera Document Solutions.

In addition, the Kyocera Group conducts due diligence training for personnel in charge of each group company at each site in the United States, China, Vietnam and Thailand. As a result, we are strengthening our internal control system and continuing to promote cooperation and collaboration with industry organizations as a framework for cooperation with external parties regarding responsible mineral procurement.

(4)Cooperation with Suppliers

Kyocera Document Solutions requests its business partners to conduct business in accordance with the "Kyocera Document Solutions Supply Chain CSR Procurement Guidelines" and requests cooperation in dealing with conflict minerals.

In addition, prior to conducting a conflict mineral survey, our company issues a notice to suppliers in Japan and overseas to inform them of Sony's policy and to request their cooperation in the survey.

In addition, when the investigation confirms involvement in a smelter or refinery that is recognized as a risk, we send a letter to our business partners requesting them not to use the smelter or refinery in order to reduce the risk.

(5)grievance mechanism

Kyocera Document Solutions has a complaint mechanism in place to address concerns and issues related to responsible mineral procurement. Internal and external stakeholders, including those in the supply chain, can report such concerns through our company website.

Our company accepts reports through the following compliance hotline.

Kyocera Document Solutions Compliance Hotline

https://contact.kyocera.co.jp/inquiry/ja/kdc_reporting-misconduct/input.html

The hotline allows anonymous reporting and allows the caller to raise concerns without retaliation.

If any violations of laws and regulations, the Kyocera Group CSR Guidelines, the Kyocera Group Human Rights Policy, the Kyocera Document Solutions Corporation Labor Code of Conduct, etc. is confirmed in relation to the provided information, we will conduct the necessary investigation and take appropriate corrective measures based on the results of the investigation.

Step 2: Identify and assess risks in the supply chain

In principle, Kyocera Document Solutions targets all suppliers except those that are clearly unrelated to 3TG and cobalt, those that have started new business during the reporting period, those that continue to do business but are deemed to be low risk with very little transaction value or order frequency, and those that only provide services.

We are striving to improve the response rate by, for example, following up with suppliers who have not yet received a response by the deadline for submitting the Conflict Minerals Survey Report Template to urge them to respond to the survey.

Suppliers are required to provide comprehensive and accurate information on 3TG and cobalt sourced through their supply chains.

Our company checks for inconsistencies and inconsistencies in submitted survey responses by utilizing statistical tools published by the Japan Auto Parts Industries Association (JAPIA).

Step 3: Design and implement strategies to address identified risks

Kyocera Document Solutions promotes responsible mineral procurement through third-party audits and certification of its smelters and refineries. Our company assumes that 3TG and cobalt smelters/refineries participating in the Responsible Mineral Assurance Process (RMAP) or equivalent independent assessment program are expected to be utilized and conducts due diligence regarding relevant 3TG and cobalt sources and supply chains.

The smelters/refineries identified through the survey are referred to the list of smelters/refineries published by the Responsible Minerals Initiative (RMI) and, where applicable, information under equivalent third-party audit schemes provided by the London Precious Metals Market Association (LBMA) and the Responsible Jewelry Association (RJC) to ascertain whether the smelters/refineries are in compliance with the third-party audit program. These third-party audit schemes are an important source of information to ascertain compliance with due diligence management arrangements and procurement practices at the smelter/refinery.

In addition, suppliers who report that they use conflict minerals from the target country or that they have not conducted a reasonable country of origin investigation (RCOI) will be subject to additional investigation, including hearings and re-investigation, to request correction and improvement.

Our company will follow up on corrective actions and discuss risk mitigation measures (including non-use requests) with suppliers as necessary.

Step 4: Conduct independent third-party audits of supply chain due diligence at identified points in the supply chain

Kyocera Document Solutions utilizes the Responsible Mineral Assurance Process (RMAP) developed by the Responsible Minerals Initiative (RMI) and comparable third-party audit schemes provided by the London Precious Metals Market Association (LBMA) and the Responsible Jewelry Association (RJC), as appropriate, to perform risk assessments from mines to smelters/refineries as part of its supply chain due diligence.

Our company requires its suppliers to use smelters/refineries that participate in these independent third-party audit programs. If these requirements are not met, suppliers are requested to remove non-compliant smelters/refineries from our company supply chain.

Participation in an independent third-party audit program is an important means of ensuring that a smelter/refinery adopts procurement practices consistent with OECD due diligence guidance and has adequate controls and systems in place to avoid fueling conflicts in the target country.

The Japan Electronics and Information Technology Industries Association (JEITA), of which parent company Kyocera Corporation is a major member, participates in and cooperates with RMI activities. Kyocera Document Solutions also uses RMAP to confirm whether smelters and refineries in its supply chain have completed third-party audits or have indicated that they will be audited.

Step 5: Report on Supply Chain Due Diligence

Kyocera Document Solutions publishes information on its social and environmental responsibilities on the Kyocera Document Solutions website.

Available at: [Certification Details](#)

Results of due diligence

Kyocera Document Solutions received a Conflict Mineral Reporting Template (CMRT) from 100% of the eligible suppliers identified in the 3TG supply chain. Based on these responses, 334 unique 3TG smelters/refineries were identified.

Of the 3TG smelters/refineries reported in our company Supply Chain, **221 (66%) ** were designated as compliant in the third-party audit program (as of January 31, 2026).

Enhanced Mineral Reporting Templates (EMRT) were also submitted by 100% of targeted suppliers identified in the cobalt supply chain. Based on these responses, we identified 91 unique cobalt smelters and refineries.

CMRTs and EMRTs submitted by some suppliers contain information that reflects the overall activities of the supplier and may not be limited to sources of 3TG or cobalt used in materials and parts directly related to our company products. Therefore, it is possible that some of the smelters/refineries identified as a result of the survey include facilities that are not directly related to the supply of raw materials for our company products.

Kyocera Document Solutions will continue to work with suppliers throughout the supply chain to evaluate and improve submissions, improve reporting quality and responsiveness, and conduct ongoing due diligence, taking into account supply chain fluctuations and changing circumstances, scope and business relationships over time.

Kyocera Document Solutions matched the smelters/refineries listed in the supplier generated template with the refineries listed in the RMI published ' Standard Smelter Names ' and identified the following facilities in 3TG's supply chain:

Smelter/Refinery	gold	tin	tungsten	tantalum
Number of smelters/refineries	175	71	51	37
Compliant smelter/refinery	99	51	36	35
non-compliant refineries and refineries	76	20	15	2

Efforts to further reduce risks and improve due diligence

Our company Document Solutions plans to continue the following initiatives to reduce the risk of non-conforming 3TG in its products, in order to meet relevant regulatory requirements and to avoid funding or benefiting armed groups involved in human rights abuses.

- We will continue our efforts in line with the OECD Due Diligence Guidance, an international framework for responsible mineral procurement.
- In cooperation with suppliers that handle 3TG or Cobalt, we request that information be updated annually. We also conduct verification activities, including traceability audits, for selected suppliers to verify the effectiveness of their traceability systems.

- Continue to encourage suppliers handling 3TG or Cobalt to participate in independent assessment programs, including RMAP, for smelters/refineries identified in the supply chain.
- Strengthen knowledge and due diligence systems across suppliers to collect procurement data on additional minerals, including cobalt and other critical minerals.
- We support RMI efforts by cooperating with Kyocera and JEITA activities.

3. Reasonable Country of Origin Reference List for TG and Cobalt

The following list identifies the country of origin of 3TG or cobalt in Kyocera Document Solutions products based on source information disclosed through the third-party audit process and RMI's Reasonable Country of Origin Investigation Report dated January 31, 2026.

The country of origin of processed 3TG is considered to be as follows.

ANDORRA	KAZAKHSTAN	SWITZERLAND
AUSTRALIA	KOREA, REPUBLIC OF	TAIWAN, PROVINCE OF CHINA
AUSTRIA	KYRGYZSTAN	TANZANIA, UNITED REPUBLIC OF
BELGIUM	LITHUANIA	THAILAND
BOLIVIA (PLURINATIONAL STATE OF)	MALAYSIA	TURKEY
