Kyocera Cloud Capture

Digitize your data and keep it safe and sound in your favorite cloud platform.

Introducing KCC: Kyocera's cloud-based capture solution

Kyocera Cloud Capture (KCC) is a cloud-native document capture solution designed to streamline business workflows by digitizing paper documents through a multifunctional printer (MFP) and securely transmitting the data to a designated cloud destination.

This fast and efficient system allows small and medium-sized companies to save time, enhance productivity, and ensure the security of scanned and processed information.

Get to know Kyocera Cloud Capture

Workgroups of 100 people or less can enjoy more efficient scanning with KCC. The software has a scanning volume of **1,000 pages or less per month, or image processing (OCR) for 500 pages or less.**

Once documents are captured by an MFP, data can be processed through KCC features such as:

- Deskew
- Correct page orientation
- Full-text OCR
- Format conversion (such as searchable PDF and Office formats)
- Manual indexing at MFP

Available functionalities vary depending on the product package selected for use.

Then, data is output to a specified destination. You can select external systems such as:

- Kyocera Cloud Information Manager (KCIM)
- Google Drive
- OneDrive Business
- SharePoint Online
- Email

Our cloud solution streamlines the scanning, converting, indexing, classifying and storing of all critical business documents.

How KCC overcomes common business challenges

KCC addresses key challenges in digitizing and managing documents, enhancing productivity for businesses transitioning to the cloud.

Business Challenge

KCC Solution

Multi-step document digitization processes can be time-consuming and overwhelming for less tech-savvy employees.

KCC simplifies data capture by enabling **direct scanning to cloud storage** from an MFP, without the need for a computer. This streamlines document management and simplifies digitization by reducing the steps and time needed to scan to the cloud.

Poorly organized documents lead to time-consuming manual hunts for data, which take focus away from more pressing areas of business.

Our solution prevents wasted time from manually searching for files. **Quick and easy document capture and storage** allow users to organize and access documents stored in third-party cloud storage platforms.

Poorly managed and disorganized data can be lost in a company's files, leading to missed opportunities and insights.

KCC links documents with search information, making retrieval faster and more efficient, so companies don't overlook or misplace important data.

Server-based document management systems are time-consuming to implement and expensive to run.

As a cloud-based solution, **KCC eliminates the need for costly on-site servers and IT specialists**, offering immediate deployment with 24/7 stability.

If your company is experiencing an increased scanning demand, migrating to the cloud will help you manage time and workloads.

Our cloud solution streamlines the storage, indexing, and classifying of documents for specific organizational departments or the whole organization.

This solution is ideal for:

Small and medium-sized businesses

Growing businesses can adopt KCC to capture data easily and store it in KCIM so that as they expand, their documents are well managed, information is not lost, and data does not become chaos.

Accounts payable

Scan and index documents to convert to searchable PDF, send documents to Kyocera Cloud Information Manager and index data for improved document management and search capabilities.

Customer service

Ensure all customer care tickets are digitized and stored in one place so customers get the most comprehensive support.

Legal

OCR converts client files to searchable PDFs, making it easy to find data within them. Users can also convert paper files to editable Word documents.

Insurance

Convert long paper contracts into searchable PDFs to ensure all information is accessible and no details are missed.

Logistics

Scan order forms and send them instantly to Kyocera Cloud Information Manager so they are quickly accessible for the next step in the supply chain.

Education

Archive students records and transcripts as searchable PDFs.

KCC is ideal for your organization if it wants to initiate its digitization journey, if there are no or few IT managers in your company, or if paper documents remain operational. Join the wave of digital transformation and discover how it can help you optimize efficiency and maximize security.
